

# CoCUT PRO X4

## Turn CorelDRAW™, Illustrator™, Freehand™ or AutoCAD for Windows into a Full Featured Professional Cutting Software

With CoCUT X4 Pro installed, designs can be cut directly from CorelDRAW, Illustrator, Freehand or AutoCAD without importing/exporting or conversion of text to curves. CoCUT X4 Pro turns CorelDRAW, Illustrator, Freehand or AutoCAD into a cutting software with better features than stand-alone sign making programs costing many times more. When partnered with the Smart Designer add-on software for CorelDRAW, CoCUT X4 Pro turns CorelDRAW into the most powerful and user-friendly design and cutting system ever developed.

### Seamless Integration with CorelDRAW, Illustrator Freehand or AutoCAD

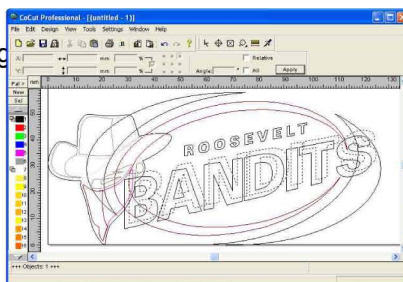

- Adds direct cutting capability to CorelDRAW 6-X4, Illustrator 8-CS3, Freehand 8-MX or AutoCAD 2000 - 2008.
- Design and cut without exporting to an external program or converting text to curves.
- Unlike “bridge programs” and “stand-alone sign making programs”, no requirement to save files in a proprietary file format - all files are saved as native files.
- Activate the cutting window by clicking on an toolbar icon or menu item in CorelDRAW, Illustrator or Freehand, drag and drop to an from CorelDRAW.
- Fully integrated with the Smart Designer add-on design and production software for CorelDRAW.

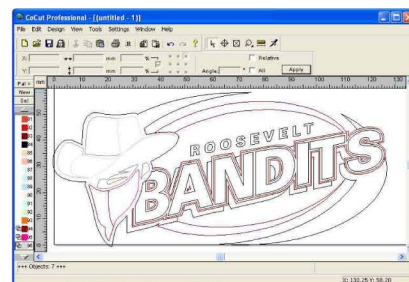

CoCUT X4 Pro with CorelDRAW

### Make Complex Clip Art Images or Designs Vinyl-Ready Automatically

- Automatically weld scripted text, overlapping objects and intersecting lines.
- Turn outlines (bitmap strokes) into cuttable contours automatically.
- Turn any vector graphic into a vinyl ready image without tedious welding.
- Specify the overlap or underlap for each color in the design (trapping).
- Specialized vector trapping function for outputting film positives for screen printing.

Before Auto-Weld

After Auto-Weld

### Powerful Cutting and Production Features

- NEW - Plot Manager, cut via serial port, parallel port, USB port or TCP/IP network connection; cut across a network connection using a PC as a plot server; cut to multiple devices simultaneously using different ports; activate, deactivate or reactivate running jobs on the fly.
- NEW - Import PDF files directly for output.
- NEW - Print and cut drivers for cutters equipped with contour cutting capability including cutters from Roland, Mimaki, Graphtec and GCC.
- NEW - Job Manager, store and preview completed jobs and scan clip art libraries for easy access to images.
- NEW - Clone objects, if a change is made to the master object, every cloned object will change.
- NEW - Jog Marks, print and cut with a cutter not equipped with an optical positioning system, ideal for Roland cutters.
- POWERweed™ feature - automatically insert user-defined vertical and horizontal weeding lines on top of any image
- FOTOCut™ feature - create photo realistic images in vinyl from bitmaps and scans.
- Scalable output size up to 98 feet by 98 feet , duplicate, position and scale objects prior to output.
- Store material preferences such as pressure and velocity settings for specific jobs or materials.
- Cut by color or selected object with full-color preview of each color or object in the design.
- Cut preview which displays material consumption on your vinyl roll.
- Increased tracking using sorted cutting order - designs are cut in an orderly fashion from left to right and top to bottom.
- Reduce material waste with automatic material optimization.
- Automatic tiling of large jobs into multiple segments with user defined overlaps - preview, reposition, and edit segments
- Automatically create cuttable contours around a bitmapped image or vectored graphics.
- Print and cut directly from CoCUT X4 Pro using any Windows compatible driver including Roland's GX 24.
- Includes drivers for most popular cutters.
